EXPORTS...

. . . their importance to the United States economy

Exports play an important role in our economy and in the increasingly interdependent world economy. The United States is the world's largest exporter— currently selling $200 billion of U.S. goods abroad— and is the world's largest economy. With 5 percent of the world's population, our country produces 24 percent of the world's industrial goods.

Exporting provides a broader marketing base for U.S. firms and is considerably more important than many Americans realize. Exports currently account for 5 million jobs in the United States. On average, 25,000 jobs are generated per $1 billion of U.S. merchandise exports.

Many jobs depend on exports

Employment generated by exports is much greater than the number actually employed in producing the final products shipped abroad. Exports create a large demand for employment that spreads throughout our economy. This includes all the jobs needed to produce goods and services supplied to export producers, the jobs needed by the export producers to produce exports, and the jobs needed to move products to our ports or borders for transport to other countries.

Most of the export-related jobs are in manufacturing and services. According to the latest estimates, 49 percent of the jobs are in manufacturing, 37 percent in services, and 14 percent in production of nonmanufactured goods. The importance of export employment varies among the industries. About one out of every eight Americans currently employed in manufacturing is dependent on exports of manufactured goods. About one out of every six jobs producing nonmanufactured goods and one out of 24 jobs in services are export-related.

Exports affect production and employment in all industries, not just in a few major export industries. For example, while the primary metals industries directly export about $6 billion of their products annually, an additional $21 billion of steel and other metals are exported in the form of American-made computers, aircraft, tractors, and other manufactured goods.

Exports are of great importance to America's farmers as well. They account for $1 of every $4 of farm sales. Likewise, many jobs in the coal mining and mineral industries, as well as a considerable number in the fishing industry, are dependent on overseas sales. Exports also support employment in the trucking, rail transport, insurance, and other service industries.

Exports essential

But the basic importance of exports is that they are the principal means by which America pays for its purchases from foreign countries. The United States imports proportionately far less than other major countries, but imports have become increasingly important to the American standard of living— and they have to be paid for. The other major industrial nations generally cover the cost of the goods they import by their exports. Merchandise exports and imports each account for an average of about 20 percent of the gross national product in that group of countries. American exports, however, were only 5.9 percent of GNP in 1983, while the ratio of imports to GNP stood at 7.8 percent. This gap between exports and imports is the trade deficit, which amounted to $57.6 billion in 1983.

The strength of our exports means a great deal to America. Exports are important to all the 50 states, and each state plays a significant role in meeting the need to export more. This report helps explain that role and shows the significance of exports in relation to employment and production.

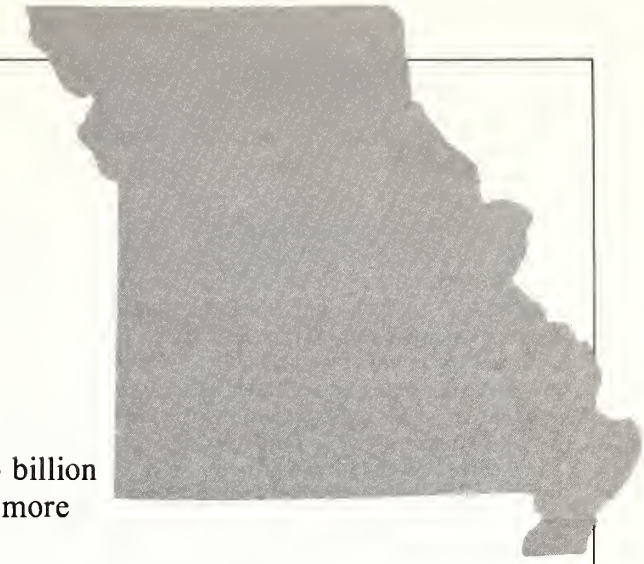
Missouri Export Highlights



Missouri's exports of manufactured goods totaled $3 billion in 1981, 79 percent above the 1977 level. They rose more than three times as fast as production.

An estimated 26,800 jobs in Missouri were directly related to producing manufactured exports in 1981. About 21,200 additional jobs were required to produce materials and parts for incorporation in products exported from the 50 states. Thus, 48,000 jobs in Missouri were dependent on exports of manufactured goods—about one of every nine manufacturing jobs from 1977 to 1981.

Missouri's share of U.S. agriculture exports totaled $1.4 billion in FY 1982, almost twice the FY 1977 value. The state was the third leading U.S. exporter of soybeans. In Missouri's farm sales, $1 of every $3 came from exports.

Manufactured exports climbed

Missouri's exports of manufactures totaled $3 billion in 1981, an increase of 79 percent since 1977. The state ranked 19th nationally in 1981 in sales of these products to foreign countries, and accounted for 2 percent of the U.S. total. Exports from Missouri firms rose much faster than the 24 percent increase in the state's manufacturing output from 1977 to 1981.

Transportation equipment was by far the largest of Missouri exports, accounting for nearly half the total. Missouri was the sixth largest U.S. exporter of that equipment. In addition, the state shipped abroad sizable amounts of nonelectric machinery, chemicals, electric and electronic equipment and food products. Together these five commodities accounted for seven-eighths of the state's manufactured exports.

Exports of transportation equipment totaled 1.4 billion in 1981, up 69 percent from the level in 1977. The share of industry production shipped abroad rose from 7.6 to 15.2 percent in that period. Missouri's production of transportation equipment declined by 16 percent from 1977 to 1981. An estimated 10,000 workers, or 18 percent of the industry's employment in the state, held jobs directly related to exports.

Nonelectric machinery exports rose by 115 percent above the 1977 level to total $349 million in 1981. More than 14 percent of the industry's output was sold overseas. These foreign sales generated about 4,600 Missouri jobs. The state's total production of nonelectric machinery increased by 55 percent during the period, with exports generating 21 percent of the growth.

Chemicals and allied products exports totaled $282 million, 119 percent more than in 1977. Overseas deliveries accounted for 7 percent of production in the state and generated an estimated 2,100 jobs.

Electric and electronic equipment exports doubled from 1977 to 1981. Overseas sales in 1981 totaled $267 million and accounted for 9 percent of the state's production. About 12 percent of the increased output of electric/electronic equipment between 1977 and 1981 stemmed from exports. An estimated 3,500 jobs were required to produce those products for foreign delivery.

The state's economy benefits from goods produced not only for direct shipment to foreign destinations but also from those for ultimate export through other states. Tables 6 to 8 show Missouri's export figures for manufactures including the output of the supplying establishments that furnish parts and materials to the manufacturers producing goods in final form for export. Such indirect exports are particularly important in industries whose products require further processing such as chemicals, primary metals, and fabricated metal products and also in those industries whose products constitute components and parts for assembly into machinery and electric equipment.

Explanatory Notes

State export statistics presented in this report are estimates, in contrast to national export statistics, which are compiled from export documents prepared at the time goods leave the country. This note considers the reasons for, and consequences of, that difference.

Export estimates for each state are needed in order to measure the relative impact throughout our nation of changes in goods sold abroad. National export data are compiled each month in detail by types of goods sold and summarized in large commodity aggregates and overall totals—but in order to measure exports by each state of origin, which is not identified in shippers' export documents, special studies are necessary.

This report—one in a series of reports for each state—brings together state export estimates from studies by various U.S. Government agencies on manufactured goods, agricultural products, fishery products, and selected minerals. Overall totals for all goods exported from each state are not shown since these studies differ in methodology, frequency, export valuation, and U.S. geographic coverage, and the manufactures and agricultural studies somewhat overlap the products covered.

Manufactured Exports in this report relate to manufactures as defined in the Standard Industrial Classification (SIC) and include manufactured food, mineral fuel products, fats, oils, firearms, and ammunition not typically part of the Standard International Trade Classification (SITC) definition of manufactures. For the United States as a whole, exports of these additional products totaled $28.5 billion in 1981. Exports, normally valued at the port of exportation, are adjusted to f.o.b. plant values to make accurate comparisons with production (shipments) data.

The state estimates for manufactured goods are based on surveys of manufacturers conducted by the Industry Division of the Bureau of the Census. These studies are for selected years; cover the continental United States, Alaska, and Hawaii; and present data classified by the 20 major SIC industry groups (2-digit). Tables 1 to 3 show the value of state exports and state production, and the number of workers employed in manufacturing plants producing the finished goods for direct shipment to foreign destinations.

State economies also benefit from manufactured goods produced for ultimate export through other states, and from jobs related to manufactured exports which are generated in nonmanufacturing industries. In the table below, percentages show the full impact of export-related manufactures on state employment. Tables 6 to 8 show the percent of production and the value of state export-related manufactures—direct exports plus indirect exports or the value of materials and parts incorporated in products exported from elsewhere in the nation—and the number of state export-related workers employed in manufacturing plants producing these goods. Table 8 also shows the total number of workers related to manufactured exports—in manufacturing plus the number in nonmanufacturing industries supporting manufactured exports by supplying materials or services such as forwarding, warehousing, transport, and other foreign trade-related services.

Agricultural Exports relate to food products other than those from marine sources, unmanufactured tobacco, and other agricultural products simply processed such as fibers, raw hides and skins, fats and oils, wine and beverages other than distilled types.

The state estimates for agricultural exports are from studies prepared by the U.S. Department of Agriculture. Exports reflect shares in national exports according to each state's production and sales data. Export values were obtained by multiplying each state's share of farm production by commodity times the total export value for each of the respective commodities. These annual studies are for fiscal years ending September 30 and for all states except Alaska, and show data classified by 18 commodity groups. Tables 4 and 5 show the value of state exports and the percent of farm sales.

Other Exports—Fishery products, various minerals, and fuel export estimates shown in the Highlights on page 1 for selected states are from studies prepared by the National Oceanic and Atmospheric Administration (NOAA), the U.S. Department of Interior, and the U.S. Department of Energy, respectively. Exports generally reflect shares in national exports according to state production.

Annual Exports and Employment Related to Manufactured Exports

	Manufactured exports	Manufacturing employment		Total employment, including nonmanufacturing employment	
	(million dollars)	(thousands)	Percent of manufacturing employment	(thousands)	Percent of civilian employment
Missouri *					
1976	1,622	40.7	9.6	72.0	3.6
1977	1,682	35.7	8.2	65.3	3.2
1980	2,382	43.9	10.0	90.1	4.1
1981	3,013	48.0	11.1	94.7	4.3
United States					
1976	83,098	2,125.4	11.3	3,452.1	4.0
1977	85,796	1,990.2	10.2	3,258.2	3.6
1980	151,216	2,639.3	12.8	4,808.3	4.8
1981	164,283	2,603.8	12.8	4,794.0	4.7

* Missouri's export-related manufactures were as follows in million dollars: 1976, 2,696; 1977, 2,834; 1980, 4,164; and 1981, 4,861. About 25 percent of the increase in Missouri's manufacturing production from 1977 to 1981 was generated by growth in export-related manufactures.

TABLE 1

Missouri Manufactured Exports, Production, and Employment, 1981

- Missouri's leading manufactured exports were transportation equipment, non-electric machinery, and chemicals.
- These three industries accounted for 69 percent of Missouri's total exports of manufactures.

Industry group	Production (million dollars)	Estimated exports (million dollars)	Exports as percent of production	Estimated employment related to exports (thousands)	Employment related to exports as percent of total employment
Total [1]	41,206	**3,013**	7.3	26.8	6.2

TABLE 2

Missouri Growth in Manufactured Exports

- In 1981, Missouri's manufactured exports totaled $3.0 billion, one and three-fourths times the 1977 value.
- Nearly two-thirds the increase stemmed from growth in transportation equipment, non-electric machinery, and chemicals exports.

Industry group	Export value (million dollars)					Percent increase from 1977 to 1981		Export increase as percent of production increase 1977-81

[1] Total includes estimated production and export-related values, and employment numbers which are withheld for certain industry groups to avoid disclosure of individual companies' data. [2] Less than 50 employees. [3] Less than one half of one percent. -- Not applicable.

TABLE 7

Missouri Growth in Export-Related Manufactures

- The 72 percent growth in the value of export-related manufactures from 1977 to 1981 was much faster than the rate of expansion in production.
- One-fifth of the increase in chemicals and electric/electronic equipment production was generated by growth in export-related manufactures.

Industry group	Export-related manufactures (million dollars)		Percent increase from 1977 to 1981		Export-related increase as percent of production increase 1977-81
	1977	1981	Export related	Production

[1] Not available. [2] 1976. -- Not applicable.
Note: Totals include values for industry groups which are not shown separately.

TABLE 8

United States Export-Related Manufactures and Employment by State

- California, New York, Texas, Pennsylvania, and Ohio led the states with the largest number of jobs related to manufactured exports.
- Employment rates were highest in Connecticut, Washington, Ohio, and Delaware for jobs in all industries related to manufactured exports.

State	Rank as export related in 1981	Export-related manufactures 1977 (million dollars)	Export-related manufactures 1981 (million dollars)	Percent increase from 1977 to 1981	Percent of state production 1981	Employment for export related as percent of manufacturing employment	Total employment related to manufactured exports (thousands)	Total employment related to manufactured exports Percent of civilian employment

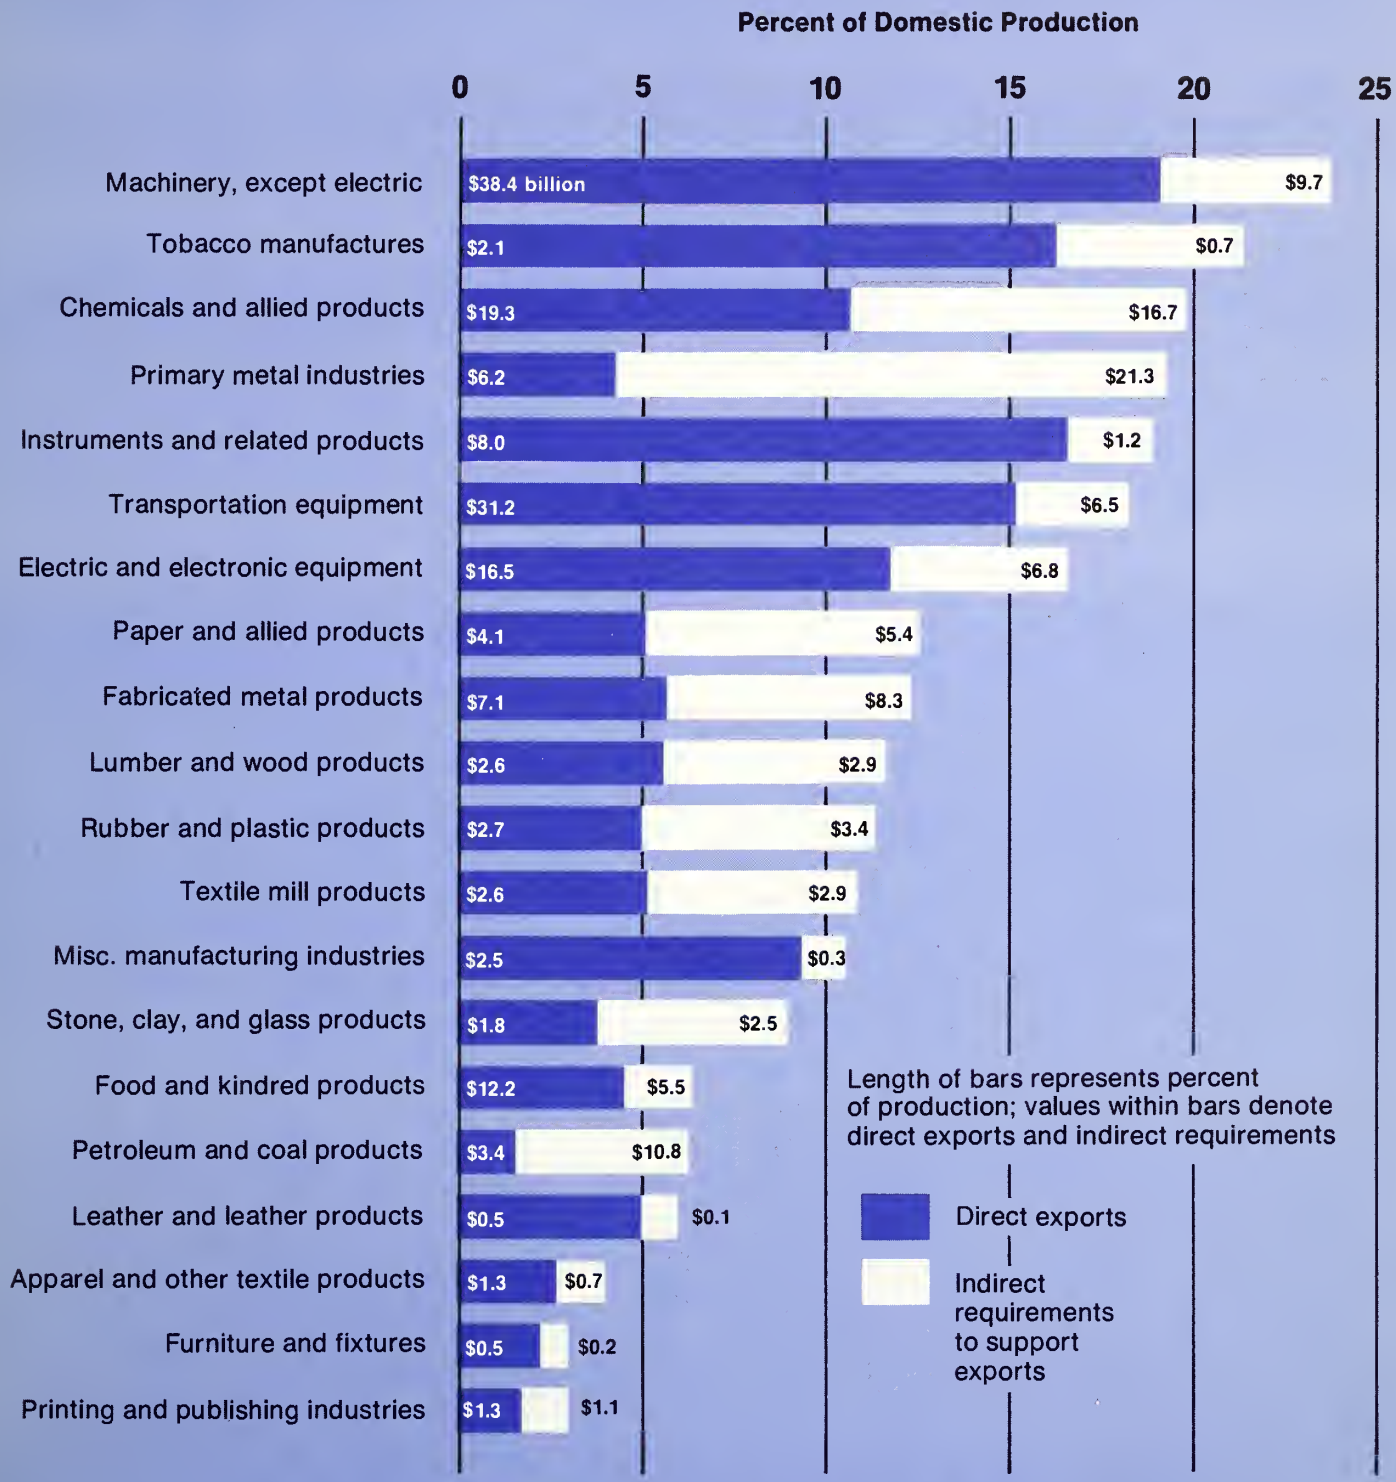
Exports of U.S. Manufacturing Industries Related to Domestic Production, 1981

Direct Exports and Indirect Requirements to Support Exports



Note: Percentages shown for each industry indicate the total relative impact of exports on the domestic economy, including direct exports and goods shipped from domestic establishments for use as inputs in manufactured products exported from other establishments. Such inputs are included in domestic production industry totals.

continued from page 1

The Census Bureau has estimated that the full impact of U.S. exports on Missouri's manufacturing activity was 11.7 percent rather than the 7.3 percent attributable to direct exports as shown in table 3. Thus, of the expanded manufacturing output generated between 1977 and 1981, 25 percent—or $1 out of every $4—was due to export-related shipments.

Soybeans leading farm export

Missouri's share of U.S. agricultural exports in FY 1982, which included some manufactures of farm origin, totaled an estimated 1.4 billion, 83 percent above the FY 1977 level. Soybeans valued at $656 million was the leading commodity exported from the state in FY 1982. Together with wheat and flour, the second largest export, valued at $343 million—they accounted for more than two-thirds of the state's foreign shipments. Missouri's exports of soybeans ranked third among the states. Other commodities of substantial value were feed grains, and meat.

The sharp growth in exports of agricultural products from FY 1977 to FY 1982 accounted for 47 percent of the rise in farm sales and added substantially to the income of Missouri farmers. In this period, the export contribution to each dollar of the state's farm sales increased from 28 to 34 cents.

Exported zinc

Missouri shipped a major part of the U.S. zinc ore and concentrates exports, valued at $32.5 million in 1981.

Export employment significant

Missouri's $3 billion of manufactured exports provided direct employment for an estimated 26,800 workers in 1981. From 1977 to 1981, the number of workers engaged in the production of manufactures changed little while employment directly related to exports rose 46 percent. Over a third of these workers were concentrated in the transportation equipment industry. These jobs accounted for 18 percent of the work force in that industry.

In addition, an estimated 21,200 jobs were required in the state to manufacture products used by other establishments in the United States as inputs for manufactures that were ultimately exported. Thus, an estimated 48,000 jobs in Missouri were directly or indirectly dependent on exports of manufactured goods. This was 11.1 percent of all manufacturing employment in the state.

Half of the jobs dependent on manufactured exports were concentrated in the transportation equipment, nonelectric machinery, and electric equipment industries. These jobs accounted for one out five jobs in the transportation equipment industry and one out of five/seven jobs in the nonelectric machinery and electric/electronic equipment industries.

An additional 46,700 jobs were generated in nonmanufacturing industries that supply materials and services supporting manufactured exports. Missouri's total employment related to manufactured exports amounted to 94,700.

It is estimated that Missouri's farm employment related to exports in 1982 amounted to 54,700 or about one out of every three farmers. This estimate assumes that the number of farmers dependent on exports corresponds to the ratio of exports to farm sales in the state. Depending on numerous variables, including the character of the product, mechanization, and degree of intensiveness of farming, it may somewhat understate or overstate the actual number dependent on exports.

STATE EXPORT REPORTS

This report is one of a series of 50 prepared by the Office of Trade and Industry Information /Trade Information and Analysis, International Trade Administration on exports from the individual states. Data on manufactured and agricultural exports are presented in tabular form for a series of years. In addition, recent information is included on state exports of fish, fish products, and minerals. The statistics on 1981 exports of manufactures by state were taken from *Origin of Exports of Manufactured Products, 1981 Annual Survey of Manufactures,* M81 (AS)-5, issued by the Bureau of the Census in May 1983. That publication can be ordered from the Data User Services Division, Customer Services (Publications), Bureau of the Census, Washington, D.C. 20233, or from any U.S. Department of Commerce District Office for $2.75 per copy. Data for earlier years were taken from similar Census reports now out of print.

The information on state shares of agricultural exports was taken from various issues of *Foreign Agricultural Trade of the United States* published by the U.S. Department of Agriculture. Special compilations on exports of minerals and fuels by state were provided by the Bureau of the Mines, U.S. Department of Interior, and by the Energy Information Administration, U.S. Department of Energy, and on fish and fishery products by National Oceanic and Atmospheric Administration, U.S. Department of Commerce.
